VEDANT DAWAKE

Software Development Engineer in Test (SDET)

vedantdawake@gmail.com • +91 7420-084019 • Pune, Maharashtra, India • LinkedIn • **Portfolio ↗**

PROFESSIONAL SUMMARY

Results-driven SDET with 3+ years of experience designing and maintaining scalable test automation frameworks for enterprise SaaS platforms. Proven track record of improving CI/CD pipeline efficiency, reducing deployment time by 85%, and saving ~2 hours daily through intelligent workflow optimization. Led end-to-end FedRAMP (.Gov) certification for Icertis — architecting the compliance automation framework, executing automation and manual testing across all security controls, and overseeing deployment — unlocking the US federal government market for the company. Adept in C#, Selenium WebDriver, Docker, Kubernetes, and GitHub Actions. ISTQB-certified with multiple company awards for quality ownership and delivery excellence.

TECHNICAL SKILLS

Languages & Core: C#, Java, SQL, PowerShell

Test Automation: Selenium WebDriver, UI Automation, End-to-End Testing, Test Framework Design, Scalable Automation Architecture

DevOps & CI/CD: GitHub Actions, CI/CD Pipeline Implementation, Automated Deployment Workflows, Self-Hosted Runners Docker, Kubernetes,

Observability & Tools: Elasticsearch, Kibana, Root Cause Analysis (RCA), Flaky Test Analysis, Impacted Test Execution Strategy

AI & Productivity: GitHub Copilot, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Software Engineer – SDET | **Icertis** | Pune, Maharashtra *December 2022 – Present*

Automation Framework Design & Infrastructure

- Designed and maintained reusable C# automation framework components with emphasis on scalability, modularity, and long-term maintainability across enterprise SaaS products.
- Containerized test execution environments using Docker, ensuring consistent and reproducible runs across local and CI/CD pipelines.
- Orchestrated parallel test execution within Kubernetes clusters, reducing overall test turnaround time significantly.
- Leveraged GitHub Copilot to accelerate test script generation and refactor legacy framework code, improving code quality and maintainability.
- Led automation coverage for high-impact product features including GDPR Data Anonymization, WOPI document integrations, and UI/UX revamps.

CI/CD Optimization & Deployment Automation

- Implemented impacted test execution workflow in CI/CD pipelines, eliminating redundant regression runs and saving approximately 2 hours of engineering time daily.
- Developed PowerShell automation scripts for Hangfire job deployment, cutting deployment time from 30 minutes to 4 minutes — an 85% reduction in deployment overhead.
- Integrated end-to-end automation suites into CI/CD pipelines using self-hosted runners with automated deployment triggers, improving release velocity.

Observability, Stability & Release Management

- Integrated Elasticsearch and Kibana to centralize automation logs, enabling faster root cause analysis (RCA) and trend visualization of flaky test patterns.
- Owned Hotfix (HF) and Maintenance Pack (MP) release cycles, managing parallel high-priority deployments while maintaining quality gates.
- Reduced automation failure rates through structured flaky test analysis and systematic framework stabilization efforts.
- Collaborated cross-functionally with QA, product, and engineering teams during release cycles to ensure timely, high-quality deliverables.

FedRAMP Compliance & .Gov Certification

- Architected and built the end-to-end automation framework required for FedRAMP (.Gov) certification compliance, covering security control validation across the full NIST 800-53 control baseline mandated for US federal cloud authorization.
- Executed comprehensive automation and manual testing across all FedRAMP security controls, ensuring full coverage and audit-readiness for the third-party assessment organization (3PAO) review.
- Oversaw deployment aspects of the certification process, coordinating across engineering and compliance teams to successfully obtain FedRAMP authorization — enabling Icertis to serve US government clients and expand into the federal sector.

CERTIFICATIONS

ISTQB Foundation Level Certified

EDUCATION

Bachelor of Engineering – Information Technology *Graduated: December 2022*

PCET's NMIET, Pune | **CGPA: 8.9 / 10.0**

AWARDS & RECOGNITION

- **Rising Star Award** – Recognized for strong ownership of automation features and consistently delivering reliable, high-quality test automation solutions.
- **Above and Beyond Award** – Awarded for successfully managing multiple Maintenance Packs and Hotfix releases while maintaining strong delivery standards under tight timelines.
- **Job Well Done Award (×3)** – For: (1) optimizing impacted workflows reducing test execution time by 18%; (2) building a GDPR automation framework improving compliance test coverage; (3) developing WOPI framework automation increasing stability for document collaboration workflows.
- **Super Builder Award** – Delivered scalable UI/UX automation solutions, improving regression suite stability and overall testing efficiency.
